The **SnapJacket** is the best solution available to repair existing pilings that have been damaged by marine organisms, the ravages of time, elements and harsh marine environments.

Using the patent pending clamshell design, you simply put it around the distressed piling, lock it into place and then fill it with concrete. It's that simple. You are left with a fix that will be warrantied for 25 years and be just as strong or stronger than the original piling.

- Total protection from destructive marine organisms
- Costs significantly less than replacing a piling
- Will last 25 years + with no maintenance
- Made from environmentally safe and UV resistant PVC
- Stops harmful chemicals leaching into the water
- Installs in minutes

SIMPLE INSTALLATION

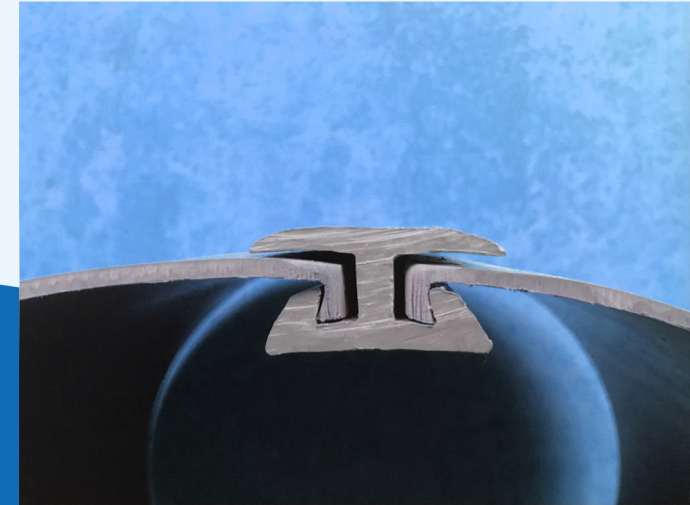

For most jobs, no special tools are needed. This means contractors don't have to haul in cranes, barges, track hoes or any other equipment that increases cost and damages property.

To install the **SnapJacket** you need:

- Safety glasses and personal flotation device
- Bucket and shovel
- Concrete
- Sawzall
- Powerwasher

The patent pending design of the sliding lock ensures that you get a tight seal that is wrapped around your piling, which protects it from damaging sun rays and destructive marine organisms.
